PROPOSAL 1 — RISE & CRUMB BAKERY

Organization: Rise & Crumb Bakery

Category: Small Business

1. Organization Overview

Rise & Crumb Bakery is a fictional local bakery that provides freshly baked products for everyday customers and special occasions. The bakery sells bread, pastries, cupcakes, cookies and celebration cakes, as well as custom cakes for birthdays and other events. Its mission is to provide fresh, good-quality baked products while giving customers a friendly and convenient service. Its vision is to become a well-known local bakery that customers can rely on for both everyday treats and special occasions.

The target audience includes local residents, families, students, working adults and customers looking for cakes for events.

2. Website Goals and Objectives

The main goal is to give the bakery a professional online presence and make it easier for customers to find information and make enquiries.

The objectives are to display products clearly, provide contact information, promote custom cake orders and make the bakery easier to find online. KPIs will include website visits, views of the Services page and the number of enquiries submitted through the website.

3. Current Website Analysis

Rise & Crumb Bakery does not currently have a website because it is a hypothetical organization. This creates an opportunity to build a website from the beginning without needing to work around an existing design.

4. Proposed Website Features and Functionality

The website will include **Home, About, Services, Enquiry and Contact Us** pages. The Services page will show the bakery's products, while the Enquiry page will allow customers to ask about custom orders. Navigation links will be consistent across the pages.

5. Design and User Experience

The website will use a warm and welcoming style with cream, brown and soft coral as the main colours. Clear headings and readable typography will make information easy to scan. A user-centered approach will be followed by considering what customers need to find quickly (Interaction Design Foundation, 2026). Low-fidelity wireframes will be created to plan the page structure before detailed styling. Wireframes are useful for planning layout, navigation and content hierarchy before development (Interaction Design Foundation, 2026).

6. Technical Requirements

The website will use HTML, with semantic elements such as `<header>`, `<nav>`, `<main>` and `<footer>`. Images will be stored separately and resized appropriately. HTML forms will be used for enquiries, with clear labels for form controls to support accessibility (MDN Web Docs, 2026). CSS and responsive design will be added in later phases.

7. Timeline and Milestones

Week 1 will cover planning and research. Week 2 will cover content, sitemap and wireframes. Week 3 will focus on HTML pages. Week 4 will involve adding content, images and navigation. Week 5 will be used for testing and corrections.

8. Budget

Domain registration – **R105**

Basic web hosting for one year – **R1,188**

Website planning and sitemap – **R900**

Content preparation and editing – **R800**

HTML website development – **R3,000**

Image preparation and optimization – **R500**

Testing and basic corrections – **R600**

Initial maintenance and updates – **R900**

Contingency for unexpected costs – **R1,007**

Estimated total – R9,000

The domain and hosting estimates are based on current pricing, with a .co.za domain costing approximately R105 and basic hosting starting at around R99 per month (xneelo, 2026).

PROPOSAL 2 — THREAD & TIDE

Organization: Thread & Tide

Category: Retail Store

1. Organization Overview

Thread & Tide is a fictional clothing retail store aimed mainly at teenagers and young adults. The store sells affordable casual and fashionable clothing, including tops, jeans, dresses, jackets and accessories. Its mission is to make current fashion more accessible by offering clothing that is stylish but reasonably priced. Its vision is to become a recognizable local clothing brand with a strong online presence.

The target audience is mainly teenagers, young adults and other customers who enjoy current fashion trends and want affordable clothing.

2. Website Goals and Objectives

The main goal is to create an online presence where customers can easily browse the store's products and find important information.

The objectives are to display products clearly, organize clothing into categories, increase awareness of the store and make it easier for customers to contact the business. KPIs will include website visitors, product-page views, enquiries and the number of visitors who view more than one product category.

3. Current Website Analysis

Thread & Tide does not currently have a website because it is a hypothetical organization. Creating the website from scratch allows the design and structure to be planned around the needs of its target customers.

4. Proposed Website Features and Functionality

The required pages will be **Home, About, Services, Enquiry and Contact Us**. A **Products** page will also be included because Thread & Tide is a retail store. Products will be grouped into categories such as tops, bottoms, dresses and accessories. An enquiry form will allow customers to ask about products and availability.

5. Design and User Experience

The website will have a clean and modern fashion-inspired design using **black, white and red** as the main colours. Black and white will create a simple and professional look, while red will be used as an accent color to highlight important buttons, links and sections. Clear headings, readable text and high-quality product images will make the website easy to browse. A user-centered approach will be followed by considering the needs of the target audience (Interaction Design Foundation, 2026). Low-fidelity wireframes will also be used to plan the layout before styling is added.

6. Technical Requirements

The website will be created using HTML with semantic elements including <header>, <nav>, <main> and <footer>. Product images will be kept in the website's images folder and resized, so they are suitable for the pages. The enquiry form will use properly labelled HTML controls because clear labels improve accessibility and usability (MDN Web Docs, 2026). CSS and responsive design will be introduced in later phases.

7. Timeline and Milestones

Week 1 will focus on research and planning. Week 2 will cover the sitemap, content and wireframes. Week 3 will involve creating the HTML pages. Week 4 will focus on adding products, images and navigation. Week 5 will be used for testing, corrections and final preparation.

8. Budget

Domain registration – **R105**

Basic web hosting for one year – **R1,188**

Website planning, sitemap and structure – **R1,200**

Product content and descriptions – **R1,000**

HTML website development – **R4,000**

Product image preparation and optimization – **R600**

Website testing and corrections – **R600**

Initial maintenance and updates – **R800**

Contingency for unexpected costs – **R507**

Estimated total – R10,000

The domain and hosting estimates are based on current pricing, with a .co.za domain costing approximately R105 and basic hosting starting at around R99 per month (xneelo, 2026).
